

Capstone project – 2

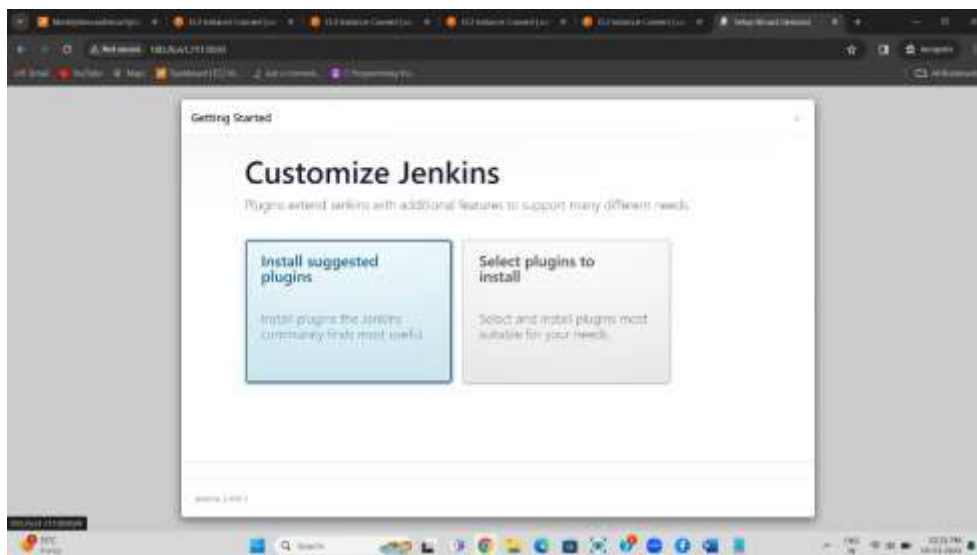

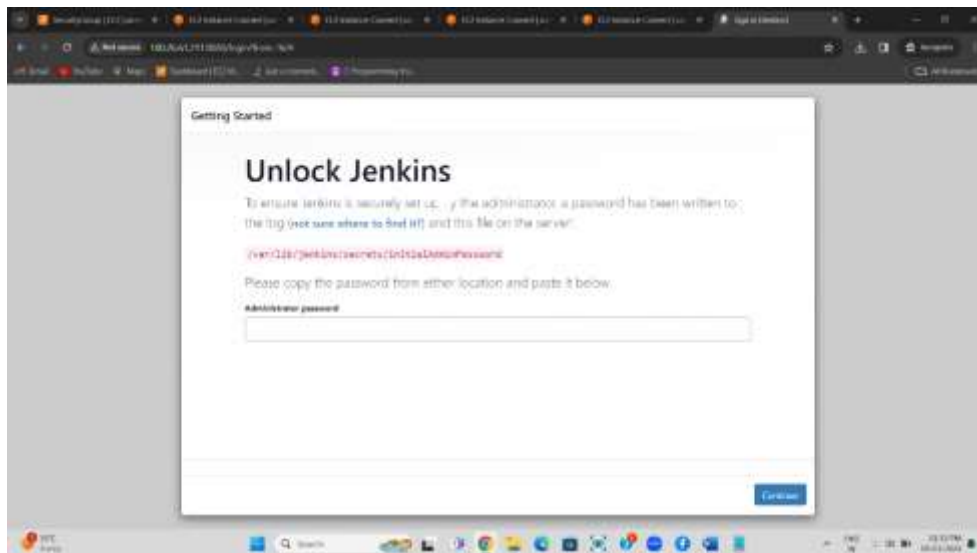

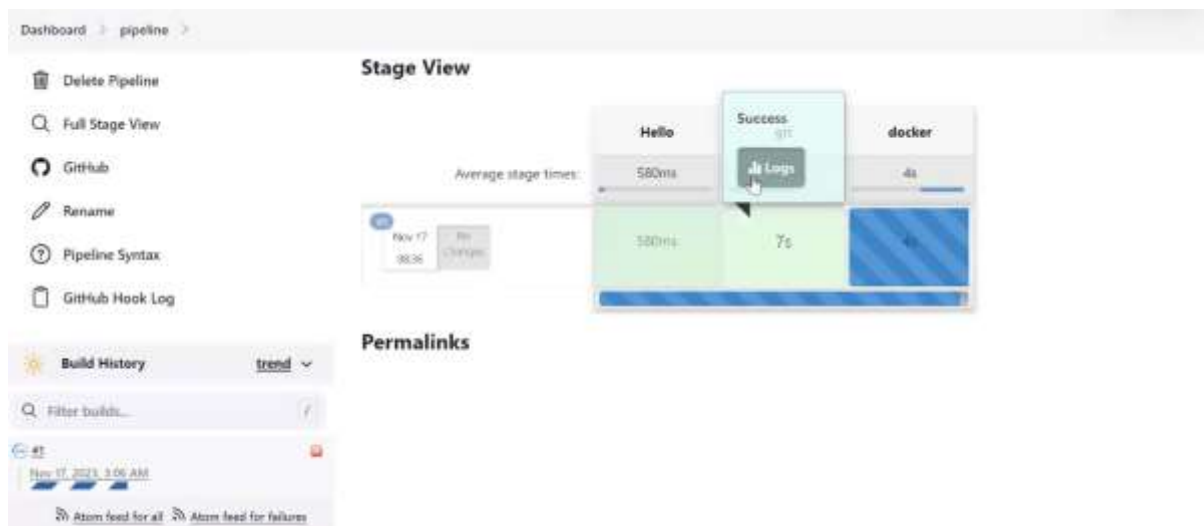

Step 1: Using Terraform accomplish the task of infrastructure creation in the AWS cloud provider.

Step 2: Architectural Advice Software's to be installed on the respective machines using configuration management. Worker1: Jenkins, Java. Worker2: Docker, Kubernetes. Worker3: Java, Docker, Kubernetes Worker4: Docker, Kubernetes.

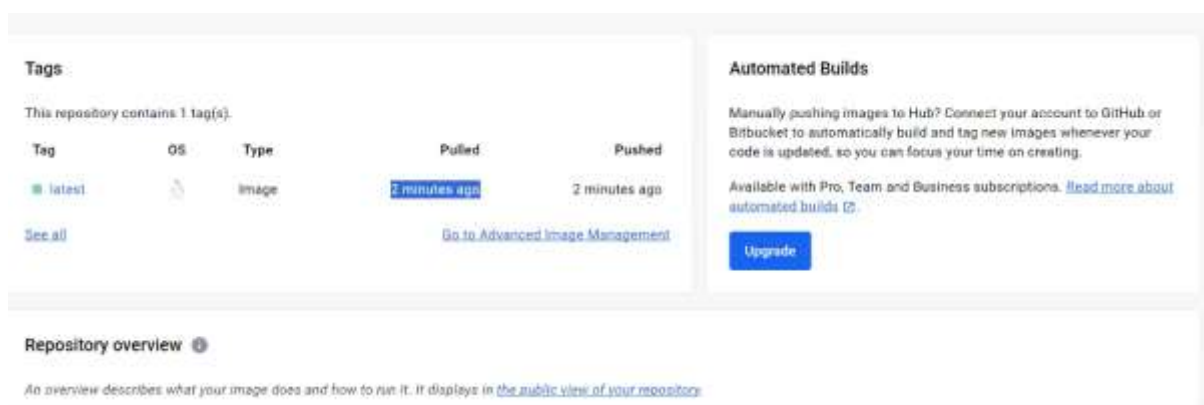

Step 3: Create a Jenkins pipeline script to accomplish the above task

Step 4: As per the requirement in the production server, you need to use the Kubernetes cluster and the containerized code from Docker hub should be deployed with 2 replicas

```

ubuntu@master:~/jenkins/workspace/pipeline$ kubectl get deploy
NAME          READY  UP-TO-DATE  AVAILABLE  AGE
nginx-deployment  2/2    2            2          2m41s
ubuntu@master:~/jenkins/workspace/pipeline$ kubectl get pods
NAME          READY  STATUS    RESTARTS  AGE
nginx-deployment-84f59c767f-9lmp1  1/1    Running    0          2m51s
nginx-deployment-84f59c767f-b9c7d  1/1    Running    0          2m51s
ubuntu@master:~/jenkins/workspace/pipeline$ kubectl get svc
NAME          TYPE          CLUSTER-IP    EXTERNAL-IP  PORT(S)          AGE
kubernetes    ClusterIP     10.96.0.1     <none>       443/TCP          33m
my-nginx      NodePort      10.96.80.179  <none>       80:30008/TCP     3m
ubuntu@master:~/jenkins/workspace/pipeline$

```

i-0bcb22adf0e23d3c (kube-master)

Step 5: Create a NodePort service and configure the same for port 30008.

Step 6 : Code build should be triggered once the commits are made in the master Branch.

Project 2 Completed
